

Sprint 1 – Solution context and design

Deadline	February 21 st , at 5:00 am
Deliverable	Sprint 1 Deliverable + Oral exam
Possible points	175 individual points (deliverable + Viva voce) + 40 process individual points + Team co-evaluation Multiplier + 46 Ethic points

Sprint 1 – Deliverable Overview

You must deliver a written report on the **group's wiki** describing one problem/solutions.

The report should include:

- PAS for each problem
- Context canvas for each solution
- Personas for each solution
- Empathy maps for each solution
- VD Map with its respective questions for each solution
- Functional and quality scenarios for each solution
- Business model and value proposition for each solution

Disclaimer:

As you may know, we expect you to deliver your work with the **BEST** quality possible. You are expected to use the knowledge obtained through your entire undergrad program and apply it to everything you do in this course. What we understand for excellent quality is described as follows:

1. **Clear images:** **Do not** upload pixelated or unreadable images.
2. **Be organized:** Keep the same format for all sections in your report.
3. **Implementation:** Follow the criteria learned in class, laboratories, and the book. **Please read the instructions for each one of these resources carefully.**

Remember that if you have any questions about something, each **TA and Professor has 2 hours of attention a week**; please use them and ask if any topic is not clear.

Sprint 1 – Detailed Description

Here you can find a detailed description of what you must deliver for Sprint 1.

Deliverable Description

1. **[Max 5 points]** Describe the **selected problem**, the **proposed solution**, its **revenue model** and the **value proposal** of the proposed solution. (**This is evaluated in the Wiki**)

2. **[Max 5 points]** Describe your problem with **YX PAS structure**. (**This is evaluated in the Wiki**)

YX:

- a. At least 12 PAS for the group of 6
- b. At least 10 PAS for the group of 5
- c. At least 8 PAS for the group of 4
- d. At least 6 PAS for the group of 3

3. **[Max 5 points]** Provide a **Context Canvas** for your solution. The context canvas must include all the content specified on MS3-01 template.

4. **[Max 5 points]** Describe **XZ personas** for your problem. (**This is evaluated in the Wiki**) Each persona description should include at least: **You must use the template provided by the course**.

XZ:

- a. At least 3 **prospective** personas and an **Analytics** personas in total for the group of 6.
- b. At least 2 **prospective** personas and an **Analytics** personas in total for the group of 5, 4 and 3.

5. **[Max 5 points]** Describe **XY empathy maps** for your problem. You must include an answer for the **Thinks**, **Sees**, **Feels** and **Does** sections relating each answer to the problems that were chosen (**This is evaluated in the Wiki**).

XY:

- a. At least 4 empathy maps in total for the group of 5 or 6.
- b. At least 3 empathy maps in total for the group of 4 and 3.

6. **[Max 10 points]** Provide a total of 14 business questions using the following restrictions (**This is evaluated in the Wiki**):

- a. At least 2 type 1 questions
- b. At least 4 type 2 questions
- c. At least 4 type 3 questions
- d. At least 2 type 4 questions
- e. At least 2 type 5 questions

7. **[Max 10 points]** Provide a **VD Map** for your solution. The VD Map must display all 14 business questions, and the data sources used on it must be obtainable through the designed solution or are publicly available. This task will also be graded considering the quality of the provided business questions (**This is evaluated in the Wiki**).

8. **[Max 5 points]** Provide **FS functional scenarios** for your solution. These scenarios are described using the book's framework (user action, system response and execution context). (**This is evaluated in the Wiki**).

FS:

- a. At least 12 functional scenarios for the group of 6
- b. At least 10 functional scenarios for the group of 5
- c. At least 8 functional scenarios for the group of 4
- d. At least 6 functional scenarios for the group of 3

E x 2

9. **[Max 5 points]** Provide **QS quality scenarios** for your solution. These scenarios are described with the book's framework in mind (scenario name, quality attributes, app status and context, changes in the context and system reaction). (**This is evaluated in the Wiki**).

QS:

- a. At least 12 quality scenarios for the group of 6
- b. At least 10 quality scenarios for the group of 5
- c. At least 8 quality scenarios for the group of 4
- d. At least 6 quality scenarios for the group of 3

E x 2

10. **[Max 30 points]** You are able to justify your design decisions and choices when defining the context for a solution (questions + VD map). (**This is evaluated in the Viva Voce**).

11. **[Max 30 points]** You are able to justify you design decisions and choices when defining the context for a solution (persona, empathy maps, PAS, context canvas). (**This is evaluated in the Viva Voce**).

12. **[Max 30 points]** You are able to **justify** your design decisions and choices when defining the context for a solution (**quality and functional scenarios**). (**This is evaluated in the Viva Voce**).

13. **[Max 30 points]** You are able to **justify** use design processes (**DP**) and artifacts to convert observations into solutions. (**This is evaluated in the Viva Voce**).

- All the above features must be delivered **before the deadline** to be able to present the oral exam.
- We will check the time of the last edition according to Gitlab. Remember Gitlab has GMT0 time, and all the deadlines are in GMT-5. If there is any edition after the deadline, the grade of the report will be 0.
- Remember, you have until the deadline to send us your repository link in **BN** (No Google docs or similar will be accepted). **If you do not follow the instructions, we will grade you with a 0.**

Ethics [max 46 points] – See syllabus for instructions and more information in the competences sheet.

Collaboration - Use technology Tools to Work Efficiently on a Team – Team Competences (multiplier [between 0 and 1] for the co-evaluation points)

- You manage your team repository in the right way, following the Git flow. In this case, everybody in your team must contribute (commits) and follow instructions for publishing artifacts and information at the wiki (e.g., format).
- You use the repository mechanism for reporting tasks and progress in the group repository (for instance, when an issue is created, re-opened, closed...)

Individual Process Competences

- **[Max 20 points]** You deliver written artifacts that are: readable, understandable, are consistent in terms of presentation format and in general are top-notch products. **These points will be graded considering the completeness of the tasks.**
- **[Max 20 points]** You can reach and use existing repository tools (i.e., Milestones, issues, squash and merge request/approval, Kanban board, verbose commits). **These points will be graded considering the completeness of the tasks.**

Note that in this sprint you will not commit/push code to the repository, however, you will commit and push non-code artifacts such as diagrams, documents, and wiki entries. Additionally, you must create a kanban board in order to manage your tasks.

If there is no evidence of this competence (“You use the existing repository tools...”) for the sprint deliverable, you will get 0 points as the final grade for the sprint deliverable. If you get 0 points in the deliverable, then you cannot present the oral exam
